SWEETWATER FIELD GUIDE

Try AI this week.

A no-risk starter guide for small businesses. Five small experiments you can run with free tools.

- Free tools
- No tech skills
- About 15 minutes

BEFORE YOU START

Curious about AI? Start small.

You don't need to buy anything or change how you run your business to try it. This guide gives you five small experiments. Pick one. See what happens.

Three things to know first

Use a free tool
ChatGPT, Claude or Gemini. Make a free account on any one.

Treat it like a new hire
Fast and eager on its first day. Helpful, but you check its work.

Pick one task
One thing you repeat every week and dread. That's experiment one.

Five things to try this week

COPY · PASTE · EDIT

Copy the example, change the **[blue parts]** to fit your business, and paste it in.

1 Answer emails faster

For anyone who answers the same questions over and over.

TRY

"Write a friendly, short reply to this customer. They asked: [paste their question]. Our answer is: [your answer in a few words]."

2 Understand long documents

Contracts, vendor agreements, manuals, insurance policies.

TRY

"Summarize the key points of this in plain English. What should I pay attention to? [paste the text]"

AI can miss things. For anything legal or financial, still read it or have a professional review it.

FIVE THINGS TO TRY

Three more quick wins.

Each one takes a few minutes. Try them with real work from this week.

3 Turn rough notes into something polished

Quotes, estimates, letters, follow-ups after a job or appointment.

> **TRY**
>
> "Turn these notes into a professional estimate for a customer: [paste your notes]."

4 Write a job posting

For anyone hiring who hates writing these.

> **TRY**
>
> "Write a job posting for a [role] at a small [type of business]. Must-haves: [list]. Keep it friendly and short."

5 Answer the questions customers always ask

Your website FAQ, text replies, front-desk scripts.

> **TRY**
>
> "Here are questions our customers ask all the time: [list them]. Write short, clear answers I can put on our website or send by text."

After a week, ask yourself

- [ ] Did it save me time, even 10 minutes?
- [ ] Did I trust what it gave me after a quick check?
- [ ] Is there a task I'd happily never do by hand again?

If yes, you've found where AI fits in your business.

STAY SAFE · STAY IN CHARGE

AI drafts. You decide.

A few simple rules keep your customers safe and your business in control.

What not to put in

- Customer, patient or client personal details: names with health info, account numbers, case details.
- Passwords, bank info or card numbers.
- Some free tools may use what you type to improve their systems. Check the privacy settings.

When in doubt, leave it out.

What AI is bad at

- It can sound confident and still be wrong. Sometimes it makes things up.
- It doesn't know your business, prices or customers unless you tell it.
- It can't take responsibility. You can.

Read everything before it goes out.

Ready for more than one task?

Free tools are great for one person and one task. Get help when:

→ It happens every day, not now and then
→ It means copying info between systems
→ Your whole team needs to use it safely
